For the same period, the performance of VNI index and S&P 500 index are 51.7% and 29.31% respectively

The Benchmark Capturing Vietnam's Fast-Rising Property Frontier

Vietnam's real estate market has always been a barometer of national ambition – an arena where urban growth, industrialization, and foreign investment collide. Today, as Vietnam accelerates toward emerging-market maturity, the BeQ Vietnam VNX Real Estate Indexes have become one of the most important tools for understanding and navigating this rapidly evolving sector.

With extraordinary performance and globally aligned methodology, these indexes position BeQ as a key architect of Vietnam's financial modernization.

Benchmark Born in a Transforming Economy

The real estate sector sits at the heart of Vietnam's development story. Explosive urbanization, rising middle-class demand, industrial-park expansion, and infrastructure mega-projects have created a market that moves faster than traditional economic indicators can track.

The BeQ Vietnam VNX Real Estate Index was built to answer a structural need: a transparent, rules-driven, internationally credible benchmark that translates this sector's momentum into hard data.

Its latest update shows a staggering 203% 12-month rolling performance, far eclipsing both the VNI (44.53%) and the S&P 500 (17.28%) over the same period. This outperformance signals a sector undergoing rapid transformation – and a benchmark designed to capture it with precision.

A High-Performance Lens on a High-Momentum Market

Real estate in Vietnam is more than housing – it is a convergence of logistics, manufacturing relocation, industrial infrastructure, consumer expansion, and urban policy. These forces create volatility, opportunity, and dispersion among listed property developers.

The VNX Real Estate Index measures the full breadth of the sector, while its concentrated counterpart – the BeQ Vietnam VNX Real Estate Top 10 Index – provides a sharper focus on its most liquid, influential, and strategically positioned companies. The Top 10 Index delivered 124% over the past 12 months, reinforcing its role as an actionable proxy for institutional allocations.

Together, the two indexes offer a dual-layered understanding of sector behavior: broad-based insights + tactical, high-momentum exposure.

Why a Modern Real Estate Index Is Essential Now

Vietnam's rapid ascent demands more sophisticated analytical and investment tools. Traditional sector reporting often lags months behind market events, while foreign investors require transparent benchmarks aligned with global standards.

The BeQ Real Estate Indexes respond to this need by offering:

- Transparent methodology aligned with international index providers
- Rules-driven constituent selection and weighting
- A sector classification aligned with global multi-asset frameworks
- Liquidity and free-float considerations for tradability

In short, they convert a complex, narrative-driven sector into a dataset investor can trust.

BeQ Vietnam VNX Real Estate Indexes Series

Design

The index is designed in accordance with international standards and is UCITS-compliant, making it suitable for supporting funds, ETFs, derivatives, and structured products.
